

VADEMECUM

A blue-tinted photograph of a laboratory setting. In the foreground, a hand in a white glove uses a pipette to transfer liquid into small glass vials. In the background, there are Erlenmeyer flasks on a stand, some containing liquids. A network of white lines and dots is overlaid on the image, connecting various points across the frame.

INSTITUTIONAL

Us:

We are a laboratory based in Buenos Aires, with a solid track record in the European and American markets. Every year we launch medicines of biological and synthetic origin, complying with official quality regulations and backed by licenses from renowned multinational laboratories.

Values, Ethics, and Quality:

We choose to preserve the societies we form with actions guided by ethics, transparency and care for good Compliance practices, which reinforces the excellence of the agreements we make and the quality of each product we offer.

Sustainability / Environment:

Through compliance with rules and procedures, we ensure that the activity we carry out does not impact the environment.

Commitment:

We have created a distribution network capable of providing continuous supply to all healthcare centers in the country, generating the proposed social commitment.

LICENCES AND INTERNATIONAL AGREEMENTS

We export medicines to the whole world, generating new challenges in each associative form that we establish, alliances that we take care of and that we follow closely, in order to be able to continue offering quality businesses and products to an increasingly dynamic market.

We have international licenses for the treatment of complex pathologies and we also seek to constantly add new proposals to bring patients closer through the treating medical professionals.
